Lock to the
left.

Usage

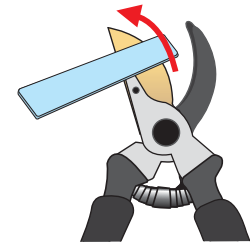

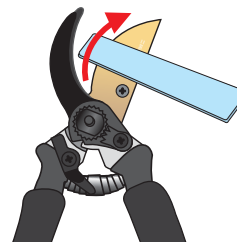

- Ideal for plant stems and light branches.
- Hold the pruners so that the main blade is closest to the stem or branch that will remain.

- To avoid plant stress or blade damage, cut stems cleanly at a 45° angle without twisting the pruners or branches.
- Wipe blades with a damp cloth after each use to remove resin and dirt and to prevent the spread of plant disease. Apply lubricating oil to maintain.
- Store in a cool, dry place with blades in locked position.
- Keep out of reach of children.

Maintenance

1. Clean and dry blades.
2. Sharpen blade as required. Use a sharpening stone at a 20° angle and glide along the beveled edge of the curved gold blade, in one direction only. Repeat on reverse side, for a 0.2-0.3 cm bevel.
3. Apply lubricating oil to the blades and spring to improve movement, prevent rust and prolong life.
